Jeremiah Carter established the Company in Highburton in 1740. Business flourished, and in 1850 Jeremiah's great, great grandson, Richard Carter, relocated the Company to Dene Works in Kirkburton, which was to become our home for the next 150 years.

Soon after Richard Carter Ltd was incorporated in 1909, World War I broke out and demand for tools increased dramatically. Indeed, history repeated itself several years later when World War II placed even greater demand on our services.

The 1970s saw the beginning of the decline of the Nationalised Coal and Steel Industries and this forced us to seek new markets. This was so successful that, despite many alterations to the Kirkburton premises during the 1980s, we outgrew Dene Works and in 1999 we moved again to Neiley Works in Honley. The new premises gave us the opportunity to embrace state of the art manufacturing techniques which, combined with our heritage, enabled us to innovate our product design and enhance quality.

It has been three centuries since our founder, Jeremiah Carter, had the vision and courage to start his Company. The Carter family, are proud of the fact that we still own and run Richard Carter Ltd. We are prouder still of the people who work here and how far we have come together. Some may see tradition and innovation as unlikely bedfellows, but for us they are what we stand for.

Richard Carter
Managing Director

THE ORIGINAL HAND TOOL MANUFACTURER

SHOVELS

With 275 years of manufacturing experience, Richard Carter Ltd has become synonymous with shovels of quality and strength, whilst offering customers value for money. 'The Carter Shovel' is available in a variety of styles and sizes, finished with handles which complement the tool, made from wood, metal, fibreglass or plastic.

SHOVEL & TOOL HANDLE VARIETIES

Richard Carter Ltd tools are manufactured in a wide variety of sizes, materials and types which should be specified at the time of ordering.

Open Socket

Open Socket Shovels are used for moving loose earth, sand, gravel and grain etc. They are hot-pressed from pre-cut sheets of either hot rolled heavy gauge Carbon Steel or Aluminium sheet. They are not primarily designed for digging or levering. This type of shovel is easily identified as Open Socket by the fact that the end of the handle (normally wood) can be seen protruding through the bottom of the pressed socket.

Solid Socket

Solid socket tools have their blades and sockets hot, double roll formed from one single piece of best quality steel. The socket is forged as an integral part of the blade (with NO welds) and this type of tool is readily identified by the fact that the handle fits into a 'blind' socket – this is the most popular range. Solid socket tools are preferred for heavy shovelling out, or back-filling trenches, mixing concrete, tarmac and ballast work. A range of handles are available in wood, steel, aluminium and fibreglass.

Barrel Crutch

This is a plainer and more economical type of T-Grip. The handle top is not as intricately contoured as the shaped grip, but being mortised, tenoned and glued, it does possess all the same strength characteristics.

Shaped Crutch T

This is a traditional Ash T-Grip, having a sculptured hilt, ergonomically shaped to fit the palm of the hand. The grip and shaft are mortised and tenoned and waterproof glued into place. A wooden dowel then secures the grip firmly into place.

Polypropylene T-Grip

This high impact, moulded polypropylene T-Grip is normally fitted to lightweight tubular products. Contoured into a non-slip grip, it is easily kept clean and is totally weatherproof.

Polypropylene YD

This 'Y' or 'D' shaped grip is moulded to comfortably fit the hand, from high impact polypropylene. Normally fitted to wooden, aluminium or tubular shafts it is totally weatherproof and easily kept clean.

Metal MYD

This metal YD grip is mainly used for Contractors and Heavy Industrial Tools. Manufactured from a tough steel frame and fitted with a robust wooden hilt and rivetted to resist twisting. Extremely strong and can be fitted to wood, aluminium, steel or fibreglass shafts.

Tubular All Steel MYD

This type of handle is mainly used for Contractors and Heavy Industrial Tools. We weld our steel handles into the body of the shovel socket for extra strength and rigidity, producing a very strong and robust tool for digging.

Polyfibre Pro

The Polyfibre style of handle is designed to offer the workman a high degree of fibreglass strength along with the comfort of a profile moulded PYD hand grip. The pultruded fibreglass core is coated with an injection moulded polypropylene sheathing creating strength and stability.

FibreMax Pro

The fibreglass MYD handle is designed for extremely heavy duty industrial use. Chemically bonded into solid socket tools, these shafts are over 30% stronger than 'All Metal' types. Fibreglass shafts have excellent structural properties and will not warp or rust in extreme weather conditions.

BS8020 Insulated

Shocksafe handles provide full conformity to the exacting specifications of BS8020. Double protection created by twin layers of sealed polymer sheathing moulded over the rigid fibreglass core. Uniquely numbered and individually certified providing full traceability, guaranteeing full conformity to live-cable working specifications.

Tubular Plain Grip

This shaft is for heavy duty industrial work for digging or lifting material out of trenches – giving a much longer reach for the more arduous tasks. Manufactured in steel or fibreglass of increasing lengths.

Shaped Long Shafts

This handle is designed to give a longer reach on a tool, so that the user does not have to bend. The wooden handle has a 'waisted' diameter for easier manipulation and a 'knobbed' end.

OPEN SOCKET SHOVELS

Our Open Socket Shovels are manufactured here in Yorkshire from best quality strip steels or Aluminium – either hot or cold pressed to a range of standard sizes. These shovels are used for a wide variety of lightweight general purpose work, from shovelling sand, gravel, earth and coal to shovelling snow and grain, suiting all users and applications.

CONTRACTORS & TELECOMMUNICATIONS TOOLS

Richard Carter Ltd offer a range of Solid Socket tools, forged from a single piece of best quality carbon steel (free from any welds), ensuring a durable tool without weakness. It is heat treated to produce a blade of supreme strength, whilst retaining flexibility to absorb the shock and stresses that come with arduous use. The range is complemented with handles available in a variety of lengths made from wood, tubular steel, fibreglass and plastic – a modern tool with a traditional feel.

All Solid socket tools are load tested and will outperform the requirements of BS3388.

ASH HANDLES

Our range of Solid Socket tools are designed for strength and durability and will outperform the requirements of BS3388 under all tests. We manufacture our wooden handles from specially selected Ash and Hardwood timbers, tapered and deep fitted into the extra long socket to give optimum strength and durability.

ASH MYD HANDLES

Most wooden shafted tools are available with 'T' or chrome plated steel, heavy duty 'MYD' grips. We only use best quality, specially selected slow growing, straight grained hardwoods. The 'flower' of the grain is on the side of the handle for greater strength and flexibility – the strong, straight grain running from front to back. The MYD is ergonomically designed to comfortably fit the largest of hands.

INSULATED – BS8020:2011 ⚡SHOCKSAFE

The Richard Carter Ltd Shocksafe range of PolyFibre Insulated Tools provides full conformity to the exacting specifications of 'BS8020: Tools for Live Working'.

BS8020:2011 is an exacting specification that demands full adherence to detailed manufacturing and testing procedures for safe working practices to be maintained by the user when working on or in close proximity to live conductor cables. Every single tool is flash tested to 10,000 Volts before the issue of a certificate, unique to each implement. Our guarantee of safety to the user, in a potentially dangerous live-working environment.

INSULATED – BS8020:2011 ⚡SHOCKSAFE

Our Shocksafe shovels are doubly protected by twin layers of polymer sheathing, moulded over the rigid fibreglass core. The orange insulation used for the outer sheathing has been developed for its high voltage and abrasion resistance properties. If the white inner sleeve becomes visible, the tool should be removed from use around live working conditions. A specially integrated collar prevents the user's hand slipping onto the steel blade. Each tool is flash tested to 10,000 Volts and printed with the BS8020 ⚡1000 Volt logo and every tool is uniquely numbered and certified, thus ensuring total traceability and guaranteeing full conformity to live cable working specifications.

PICK UP A COPY OF OUR ⚡SHOCKSAFE BROCHURE FOR MORE INFORMATION

BS8020:2011 is an exacting specification that demands full adherence to detailed manufacturing and testing procedures for safe working practices to be maintained by the user when working on or in close proximity to live conductor cables. Every single tool is flash tested to 10,000 Volts before the issue of a certificate, unique to each implement. Our guarantee of safety to the user, in a potentially dangerous live-working environment.

INSULATED – BS8020:2011 ⚡ SHOCKSAFE

The strongest tools ever produced by Carters, the SUMO range, utilises forgings innovated to withstand up to 200kgs of sustained force without deformation.

The SUMO range symbolises Carters pioneering attitude towards manufacturing the best tools for professional contractors.

THE ORIGINAL HAND TOOL MANUFACTURER

1740
2015
CELEBRATING
275 YEARS

HANDLES

Manufactured, at our Huddersfield woodturning facility from the finest hickory, ash and hardwood timbers, selected for uniformity and straightness of grain and ergonomically designed to reduce vibration in use, our handles are available in a variety of lengths, shapes and sizes.

HICKORY HAMMER HANDLES

We produce over 200 different tool handles of varying shapes, all machine turned from best quality American Hickory. We carefully select and hand finish each handle to ensure maximum strength and durability.
